## Introducing BullyLiner™

Suitable for Ute trays, car trailers, horse floats, caravans, trucks, bull bars, tyre rims, under body and tyre arches (sound dampener).

BullyLiner™ is a patented, state of the art waterbased single component coating, requiring no catalyst to activate.

BullyLiner is designed for both the DIY or Professional user, a friendly & environmentally conscious technology which is easily applied by Brush, Roller or Spray.

BullyLiner's recycled tyre technology, is non-toxic ultra-low VOC chemistry that cures in ambient air, allowing its user to virtually vulcanise rubber onto almost any surface! Applied onto any surface it is like lining it with rubber tyres.

BullyLiner can be built up to any thickness by simply applying multiple coats.

BullyLiner technology is also further enhanced with Self-Cleaning Nano-Technology.

The unique properties of Nano-Technology within BullyLiner's chemistry, reduces the surface contact point of contamination, resulting in a durable rubberised surface coating that can be more easily cleaned compared to other conventional textured non-slip surface coatings.

BullyLiner can be applied onto any painted or unpainted metals and plastics, making it a tough and robust coating. Available in 8 colours, packaged in 4 litre cubes, larger sizes are also available in 20 litres and 200 litres.
